Chapter 1

GAP-JSON mapping

This package defines a mapping between the JSON markup language and GAP. The built-in datatypes of GAP provide an easy mapping to and from JSON. This package uses the following mapping between GAP and JSON.

- JSON lists are mapped to GAP lists
- JSON dictionaries are mapped to GAP records
- JSON strings are mapped to GAP strings
- Integers are mapped to GAP integers, non-integer numbers are mapped to Floats
- true, false and null are mapped to true, false and fail respectively

Note that this library is *NOT* intended to provide a general purpose library for transmitting any GAP object. If you wish to do this, look at the openmath package, or IO_Pickle in the IO package.

1.1 Methods

1.1.1 GapToJsonStream

\[
\text{GapToJsonStream}(\text{stream, value}) \quad \text{(function)}
\]

Converts the value to JSON, and outputs it to stream. This function disables GAP’s usual line splitting while JSON is being outputted.

1.1.2 GapToJsonString

\[
\text{GapToJsonString(value)} \quad \text{(function)}
\]

Returns: string

Converts a GAP value to a JSON string.

1.1.3 JsonStringToGap

\[
\text{JsonStringToGap(string)} \quad \text{(function)}
\]

Returns: value

Converts a JSON string into a GAP value.
1.1.4 JsonStreamToGap

- JsonStreamToGap(stream) (function)
  
  **Returns:** value
  
  Reads a single JSON object from a *stream* and converts it to a GAP value.
